CASE STUDY: JP RUSHING CONSULTING

INDUSTRY: Software Development
DEVELOPMENT MODULES: User Administration, Document Management, Time and Expense Reporting, Custom Reporting Tools

PROFILE:

JP Rushing Consulting is an independent consultancy whose structure, consulting practices, and service methodologies have been designed to provide complete and highly competent enterprise application design, development, and integration services. They have extensive experience in the selection, development, implementation, and integration of both packaged and custom software solutions in support of Customer Relationship Management, Enterprise Resource Planning, and Supply Chain Management.

CHALLENGES:

Our client found they were lacking a reliable approach to project management, namely document management and time and expense reporting. They required a document center that allowed project managers and contractors to share important project-related documents while providing a controlled check-in/check-out environment for updates and revisions. JP Rushing also suffered from a non-standardized method of collecting time and expense information from their contractors, causing their accounting department to lose valuable time and money.

THE SOLUTION:

Cyberonyx worked closely with JP Rushing Consulting to develop a web-based application that would handle their project's document management and T&E reporting from a secure, centralized location. Project managers are able to create and supervise users; upload, edit and delete documents assigned to their projects while tracking which documents are available for editing based upon a sophisticated check-in/check-out system.

Time and expense reports are also monitored and updated via a simple connection to the internet. Contractors may enter time and expense items based on time and project deadlines. T&E administrators may monitor their progress and generate reports that easily migrate into existing systems and programs.

THE RESULTS:

After deploying the new web-based system, JP Rushing found immediate success in time and money gained. The new system was implemented quickly and provides up to date status of their projects, as well as creating a controlled environment for document management and T&E reporting. Users, already familiar with browsers and internet capabilities, find the system easy to use as well as a valuable tool.

ABOUT CYBERONYX:

Cyberonyx specializes in creating custom web solutions for all industries. Our web application development has ranged from sophisticated Project Management tools, including Time and Expense, Document Management, Dispatch Center and Invoicing systems, to elaborate full site management solutions, shopping carts and bulletin board sites. We specialize in Microsoft technologies and languages with connectivity to powerful SQL Server databases. We take the time to learn your business and develop intuitive, robust applications that are easy to deploy, maintain and upgrade.
